Hi Ben,

Have you heard from the client when they will be returning to do the vapor sampling? We are trying to figure out our schedules for next week.

Thank you,

Anne Lawrence, P.G.

I forgot to include that the contractor was setting vapor points SV-1 at 5' and 15' when I arrived. The location was hand auger the pervious day.

Hi Ben,

Below is a summary of the work completed today at the W. Slauson Tanker site.

All remaining soil vapor locations (SV-2 through SV-7) were bored and 12 soil vapor points installed at 5' and 15' below ground surface at each location. Soil samples for VOCs and TPH analyses were collected at 0.5, 2.5, 5.0, 10.0 and 15.0 feet below ground surface at each location.

In SV-2, SV-3, and SV-5 high headspace readings were measured at the 5' and shallower depths (>15,000 ppm). The headspace readings in the remaining three locations were below 20ppm at all depths.

Soil Vapor sampling will occur on Friday June 21 or next week based on procurement of SUMMA canisters.

Thank you,

Anne Lawrence, P.G.
